                                          This sequence represents human BMOG, a novel member of the B cell myelin obligodemofracyte glycoprotein family that is expressed by germinal centre B cells. 3 C-terminal splice variants (see AAYO6401-03) of BMOG were identified. The protein is present primarily in the spleen, in lymph nodes and in germinal centre B cells. It may have immunoregulatory functions, and soluble or chimeric fusion proteins of BMOG may be used to regulate the immune system in autoimmune or inflammatory disease. Vectors comprising BMOG, prokaryotic and eukaryotic host cells, and a method of producing BMOG using these transformed host cells are also provided. BMOG polypeptides can be used for modulating the immune system of a subject or to inhibit signal transduction in a cell expressing BMOG by contacting it with a soluble BMOG protein. The nucleic acid can be used for gene therapy. The protein can also be used to target a toxin, imaging agent or radionuclide to a cell expressing BMOG. (All claimed)

Peptide

```
The invention relates to isolated peptide fragments of a natural cytotoxicity receptor (NCR) of natural killer (NK) cells, or active tragments, analogs or derivatives, wherein the peptide fragment is capable of binding to a membrane-associated biomolecule of a tumor cell, and the biomolecule comprises at least one sulfated polyasccharide, and serves as the binding site of the NCR mediating the lysis of tumor cells by NK cells, with the proviso that the peptide is other than a full ength NCR polypeptide or an isolated NCR extracellular domain. Also described are: (1) an antibody that recognizes an epitope on a target membrane-associated biomolecule of a tumor cell, the biomolecule of cumor cells by NK cells via the NCR; (2) a method of targeting a tumor cells by NK cells via the NCR; (2) a method of targeting a tumor cell shy NK cells via the NCR; (2) a method of targeting a tumor cells by NK cells via the NCR; (2) a method of targeting a tumor cell shy NK cells via the NCR; (2) a method of binding to a membrane-associated sulfated polysaccharide of a tumor cell. The peptide is a fragment of NCR which are capable of binding to a cidantifying peptide is a lragment of NCR selected from NKp46. It is a fragment of the D2 domain of NKp46 comprising a sequence fully defined in the specification (SEQ ID NOS: 1 and 4). Alternatively, the peptide is a fragment of NCR a sequence fully defined in the specification (SEQ ID NOS: 3 and 4). Alternatively, is palected from a sequence fully defined in the specification (SEQ ID NOS: 3 and 4). Alternatively, is can a sequence fully defined in the specification of sequence membrane-associated biomolecule is selected from a sequence fully defined in the specification of SEQ ID NOS: 3 and 4). Alternatively, is can a sequence fully defined in the specification of SEQ ID NOS: 3 and 4). Alternatively, is can also a sequence fully defined in the specification of SEQ ID NOS: 3 and 4). Alternatively of can be shown the specification of NCR and sequence fully defined the specification of NC
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              a proteoglycan. The antibody is capable of blocking the binding of NK cells via NCR to membrane-associated sulfated polysaccharide biomolecules in a cell, therefore, inhibiting NCR-dependent cell lysis associated with autoimmunity. The peptides and antibodies of the invention are useful for targeting a tumor cell in a subject via an NCR-dependent mechanism. The composition and methods of the invention are useful for targeting tumor cells to diagnose and/or treat benign and malignant tumors or proliferative diseases. This sequence represents human natural

The invention relates to human NKp30 receptor and its corresponding CDNA molecule which is involved in natural cytotoxicity mediated by natural killer (NK) cells and antibodies that identify the same. NKp30 receptor is a member of immunoglobulin super family (15-SF). NKp30 is selectively expressed on the surface of human mature NK cells. NKp30 and its cDNA are useful for detecting and/or quantifying the presence of NK cells in a biological sample. The invention also provide Kits for detecting and/or quantifying the presence of NK cells, for the selective removal of NK cells from a biological sample, for the positive and selective of NK cells from a biological sample, for the positive and selective of NK cells from a biological sample and for the in vitro cumulation of NK cell cytotoxicity. The invention further provides a pharmaceutical composition which is used as a drug for grafting cellar composition which is used as a drug for grafting versus tumour (GyT) and especially graft versus leukaemia (GyL), and for the prevention, palliation and/or therapy of solid or liquid tumours, cellar and notable and lung adenocarcinoma, and/or continuation of microorganism, notably viral infection. NKp30 antibodies are useful for incroorganism, notably viral infection. 1 MAMMILLILIMYHPGSCALWYSQPPEIRTLEGSSAFLPCSFNASQGRLAIGSVTWFRDEV 60 /el compound, useful for detection and/or quantifying the presence of cells, comprises the amino acid sequences of the NKp30 molecule. identifying NKp30 natural ligands and allow assessment of the level of surface NKp30 ligand expressed on an NK-susceptible target cell and the comparison of this level to the standard physiological one. Hence NKp30 antibodies are useful in the diagnosis of tumours or of infection. The polypeptides and polynucleotides are useful for retaring and diagnosing immune related disorders in mammals. The immune related disorders include systemic lupus erythematosus, rheumatoid arthritis, osteoarthritis, juvenile chronic arthritis, systemic langule disorders include systemic chronic arthritis, systemic haemolytic anaemia, autoimmune thrombocytopenia, thyroiditis, diabetes mellitus, immune-mediated renal disease, demyelinating diseases of the central or paripheral nervous system, demyelinating diseases of the duillain-Barre syndrome and chronic inflammatory demyelinating polymeuropathy, polyneuropathy. This sequence represents a human PRO polypeptide of the

killer (NK) cells, and particularly by mature NK cells. Claimed pharmaceutical compositions that have a stimulating effect on the proliferation of NK cells comprise an antibody such as an anti-NKp30 antibody or anti-NKp46 antibody or its immuno-reactive fragment and a cytokine selected from interleukin-2 (IL2), IL12, IL15 and IL21, the antibody or its immuno-reactive fragment and incorporate or separately to a subject. The anti-NKp30 antibody is an isolated antibody or its antigen-binding fragment which specifically binds to NKp30 or to a cragment ADQ10924-ADQ30227 of NKp30. The pharmaceutical compositions, when used for daily subcutaneous injection, comprising from 1 ng to 100 mg/kg (body weight) of antibody(ies), and lower than 1 million units/square meters/day of cytokine(s), are useful for the prevention, cuits/square mid therapy of e.g. melanoma, chronic myeloid leukaemia, acute myeloid leukaemia, lymphoma, multiple myeloma, hepatocarcinoma, lung adenocarcinoma, neuroblastocam and for antimicrobial prevention, palliation and therapy (claimed).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     120

This sequence represents human BMOG, a novel member of the B cell myelin oligodendrocyte glycoprotein family that is expressed by germinal centre B cells. 3 C-terminal splice variants (see AAYO6401-03) of BMOG were identified. The protein is present primarily in the spleen, in lymph nodes and in germinal centre B cells. It may have immunoregulatory functions, and soluble or chimeric fusion proteins of BMOG may be used to regulate the immune system in autoimmune or inflammatory disease. Vectors comprising BMOG prokaryotic and eukaryotic host cells, and a method of producing BMOG using these transformed host cells are also provided. BMOG polypeptides can be used for modularing the immune system of a subject or to inhibit signal transduction in a cell expressing BMOG by contacting it with a soluble BMOG protein. The nucleic acid can be used for gene therapy. The protein can also be used to target a toxin, imaging agent or radionuclide to a cell expressing BMOG. (All claimed)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           7
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       61 VPGKEVRNGTPEFRGRLAPLASSRFLHDHQAELHIRDVRGHDASIYVCRVEVLGLGVGTG 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This sequence represents human BMOG, a novel member of the B cell myelin oligodendrocyte glycoprotein family that is expressed by germinal centre B cells. 3 C-terminal splice variants (see AAYO6401-03) of BMOG were identified. The protein is present primarily in the spleen, in lymph nodes and in germinal centre B cells. It may have immunoregulatory functions, and soluble or chimeric fusion proteins of BMOG may be used to regulate the immune system in autoimmune or inflammatory disease. Vectors comprising BMOG prokaryotic and eukaryotic host cells, and a method of producing BMOG using these transformed host cells are also provided. BMOG polypeptides can be used for modulating the immune system of a subject or to inhibit signal transduction in a cell expressing BMOG by contacting it with a soluble BMOG protein. The nucleic acid can be used for gene therapy. The protein can also be used to target a toxin, imaging agent or radionuclide to a cell expressing BMOG. (All claimed)

detection of a variety of virtal infections, by using complex agents comprising the natural killer (NK) cells activating proteins, NKp46 and NKp44 and functional fragments thereof, linked to therapeutic or imaging agents. The complex is useful for treating pathologies associated with viral infections (e.g. infections caused by influenza virus, HIV, Epstein -Barr virus, cycomegalovirus, vaccinia virus, ECMV, MWM or herpes virus) and cancer (e.g. carcinomas, melanomas, lymphomas and sarcomas), and for the imaging and monitoring of cancer. The complex may also be used to detect the presence of abnormal cells in a sample. The antibodies can be used to qualitatively or quantitatively or quantitatively or quantitatively or grown immunoglobulin (G (IGG)) For region fusion protein.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to compositions and methods for the treatment and detection of a variety of viral infections, by using complex agents comprising the natural killer (NK) cells activating proteins, NKp46 and NKp44 and functional fragments thereof, linked to therapeutic or imaging agents. The complex is useful for treating pathologies associated with viral infections (e.g. infections caused by influenza virus, HIV, Epstein-Barr virus, Cytomegalovirus, vaccinia virus, ECMV, MVM or herpes virus) and cancer (e.g. carcinomas, melanomas, lymphomas and sarromas), and for the imaging and monitoring of cancer. The complex may also be used to detect the presence of abnormal cells in a sample. The antibodies can be used to qualitatively or quantitatively detect the ligand for the complex. The present sequence is human NKp30 protein
                                                                                                                                                                                                                                                                                                                                                                                                          New targeting complex capable of targeting an active substance to a target cell, comprising a target recognition segment and an active segment, useful for treating pathologies associated with viral infections
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         61 VPGKEVRNGTPEFRGRLAPLASSRFLHDHQAELHIRDVRGHDASIYVCRVEVLGLGVGTG 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            VPGKEVRNGTPEFRGRLAPLASSRFLHDHQAELHIRDVRGHDASIYVCRVEVLGLGVGTG 120

molecule which reacted and the corresponding curva molecule which reacted in any receptor and its corresponding curva molecule which is involved in natural cyctoxicity mediated by natural killer (NK) cells and antibodies that identify the same. NKp30 receptor is a member of immunoglobulin super family (Ig-SF). WKp30 and its cDNA are useful for detecting and/or quantifying the presence of NK cells. NKp30 and its cDNA are biological sample. The invention also provide kits for detecting and/or quantifying the presence of NK cells for the selective removal of NK cells from a biological sample, for the positive and selective or purification of NK cells from a biological sample, for the positive and for the in vitro purification of NK cells from a biological sample and for the in vitro seimulation of NK cells from a biological sample and for the in vitro parameterical composition which is used as a drug for grafting chancement, graft versus host (GvH) inhibition, stimulation of graft versus tumour (GvT) and especially graft versus leukaemia (GvT), and for the prevention, palliation and/or therapy of solid or liquid tumours, such as melanoma, hepatocarcinoma and lung adenocarcinoma, and/or microorganism, notably viral infection. NKp30 antibodies are useful for comparison of this level to the standard physiological one. Hence NKp30 antibodies are useful in the content of the diagnosis of tumours or of infection. The content of the diagnosis of tumours or of infection. The content of the diagnosis of tumours or of infection. The content of the diagnosis of tumours or of infection. The content of the diagnosis of tumours or of infection. The content of the second or the content of t
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             138

```
The present sequence is that of the extracellular region of human Nkp30 and 20030923, a 190 amino acid polypeptide that is selectively expressed by natural killer. (NK) cells, and particularly by mature NK cells. Claimed plaraceutical compositions that have a stimulating effect on the proliferation of NK cells comprise an antibody such as an anti-NKp30 cutibody or anti-NKp40 antibody or its immuno-reactive fragment and a cytokine selected from interleukin-2 (IL2), IL12, IL15 and IL21, the antibody (ies) and cytokine(s) being administered together or separately cto a subject. The anti-NKp30 antibody is an isolated antibody or its cantibody in the antibody or its antipen-binding fragment which specifically binds to NKp30 or to a fragment, including the extracellular region, of NKp30. The fragment in sto 100 mg/kg (body weight) of antibody (ies), and comprising from 1 ng to 100 mg/kg (body weight) of antibody (ies), and lower than 1 million units/square meters/day of cytokine(s), are useful for the prevention, palliation and therapy of e.g. melanoma, chronic myeloid leukaemia, acute myeloid leukaemia, lymphoma, multiple myeloma, heppatocarcinoma, lung adenocarcinoma, neuroblastema and for antimicrobial prevention, palliation and therapy (claimed).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          138

Mandelboim O, Porgador A;

WPI; 2004-468830/44. N-PSDB; ADP48757. New polypeptide conjugate comprising a target recognition segment comprising a Natural Killer cell receptor consisting of NKp30, useful in preparing a composition for treating a neoplastic disease.

Claim 5; SEQ ID NO 4; 66pp; English

The present invention describes a polypeptide conjugate comprising: (a) a target recognition segment comprising a natural killer cell receptor (NCR) or its fragment that binds to a cellular ligand expressed on the surface of a target tumour cell; and (b) a second segment comprising an active agent capable of exerting a cellular ligand expressed on the surface of a target tumour cell; and (b) a second segment comprising an active agent capable of exerting a corporative effect on the target cell. Also described: (l) an isolated polymucleotide encoding the polypeptide conjugate; (2) a vector and capable of expressing the polypeptide conjugate; (4) a pharmaceutical composition comprising the polypeptide conjugate and a carrier, stabiliser or diluent; (5) treating a neoplastic disease in a subject; (6) inhibiting the growth of a tumour cell in a subject; and (7) delivering a cytotoxic substance to a target tumour cell in a subject; and (7) delivering a cytotoxic substance to a target tumour cell in a subject. The polypeptide conjugate has cytostatic activity, and can be used in gene therapy. The polypeptide conjugate is useful in preparing a composition for treating a copyreptide conjugate is useful in preparing a composition for treating a copyreptide conjugate sease associated with a solid tumour or a non-solid tumour, e.g., carcinomas, melanomas, gliomas, neuroblastomas, Bellomas, neuroblastomas, Bellomas, Collid tumour or laurel a human natural cell corporation. killer cytotoxicity receptor conjugate, designated NKp30-Fc conjugate, which is used in the exemplification of the present invention.

The invention relates to isolated peptide fragments of a natural cytotoxicity receptor (NCR) of natural killer (NK) cells, or active cytotoxicity receptor (NCR) of natural killer (NK) cells, or active cragable of binding to a membrane-associated biomolecule of a tumor cell, and the biomolecule comprises at least one sulfated polysaccharide, and serves as the binding site of the NCR mediating the lysis of tumor cells by NK cells, with the proviso that the peptide is other than a full length NCR polypeptide or an isolated NCR extracellular domain. Also described are: (1) an antibody that recognizes an epitope on a target membrane-associated biomolecule of a tumor cell; the biomolecule comprising at least one sulfated polysaccharide and mediating the lysis of tumor cells by NK cells via the NCR; (2) a method of targeting a tumor cell by NK cells via the NCR; (2) a method of targeting a tumor cell by NK cells via the NCR; (2) a method of binding to a membrane-associated sulfated polysaccharide of a tumor cell. The peptide cell in a subject via an NCR velocation of NCR which are capable of binding to a membrane-associated sulfated polysaccharide of a tumor cell. The peptide cell in the specification (SEQ ID NOS: 1 and 2), or a fragment of the D2 domain of NKp46 comprising a sequence fully defined in the specification (SEQ ID NOS: 3 and 4). Alternatively, the peptide is a fragment of NKp46 is a fragment of NKp46 in the specification (SEQ ID NOS: 3). The having a sequence fully defined in the specification (SEQ ID NOS: 5). The

```
membrane-associated biomolecule is selected from a glycosaminoglycan and a proteoglycan. The antibody is capable of blocking the binding of NK cells via NCR to membrane-associated sulfated polysaccharide biomolecules in a cell, therefore, inhibiting NCR-dependent cell lysis associated with autoimmunity. The peptides and antibodies of the invention are useful for targeting a tumor cell in a subject via an NCR-dependent mechanism. The composition and methods of the invention are useful for targeting tumor cells to diagnose and/or treat benign and malignant tumors or proliferative diagnose. This sequence represents a fusion protein computation human CDS leader sequence and human NKD30 D domain fused to the FC domain of human IgG1.

FUNCTION: Cytotoxicity activating receptor that may contribute to the increased efficiency of activated natural killer (NK) cells to mediate tumor cell lysis energy subbunit: Interacts with CD3Z.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ISOId=014931-6; Sequence=VSP_010411, VSP_010412;
NOTe=NO experimental confirmation available;
-!- TISSUE SPECIFICITY: Selectivelly expressed by all resting and activated NK cells and weakly expressed in spleen.
-!- SIMILARITY: Belongs to the natural cytotoxicity receptor (NCR)
                                                                    -:- SUBGNIT: Interacts with CD3Z.

Natural cytotoxicity triggering receptor 3 precursor (Natural killer cell p30-related protein) (NKp30) (NK-p30).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      "Characterization of natural killer receptors in chimpanzees.";
Submitted (NOV-2002) to the EMBL/GenBank/DBJ databases.
-!- FUNCTION: Cytotoxicity activating receptor that may contribute to the increased efficiency of activated natural killer (NK) cells mediate tumor cell lyais (By similarity).
-!- SUBUNIT: Interacts with CD32 (By similarity).
-!- SUBCELDULAR LOCATION: Type I membrane protein (Potential).
-!- SIMILARITY: Belongs to the natural cytotoxicity receptor (NCR)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               -!- SIMILARITY: Contains 1 Ig-like (immunoglobulin-like) domain.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Rizzi M., Biassoni R.;
"Non MHC specific natural cytotoxicity receptors (NCR) expressed in Macaca fascicularis lymphoid cells.";
Macaca fascicularis lymphoid cells.";
Submitted (JUN-2000) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: Cytotoxicity activating receptor that may contribute to the increased efficiency of activated natural killer (NK) cells to mediate tumor cell lysis (By similarity).
-!- SUBWIT: Interacts with CD3Z (By similarity).
-!- SUBWIT: Interacts with CD3Z (By similarity).
-!- SUBCELLULAR LOCATION: Type I membrane protein (Potential).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1 MAWMALALILIMVHPGSCALWVSQPPEIRTLEGSSAFLPCSFNASQGRLAIGSVTWFRDEV

-!- SUBUNIT: Interacts with CD3Z (By similarity).
-!- SUBCELLULAR LOCATION: Type I membrane protein (Potential).
-!- SIMILARITY: Belongs to the natural cytotoxicity receptor (NCR) family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           STRAIN=Brown Norway;

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 10, 1

                                                                                                                                                                                                                                                        Sequence 47, Application US/09646561

Patent No. 6852847

GENERAL INFORMATION:

APPLICANT: Sim, Gek-Kee;

APPLICANT: Sim, Gek-Kee;

APPLICANT: Sim, Gek-Kee;

TITLE OF INVENTION: NOVEL FORMS OF T CELL COSTIMULATORY PR;

TITLE OF INVENTION: ACID MOLECULES, AND USES THEREOF;

FILE REFERENCE: IM-1-C1-PCT

CURRENT APPLICATION NUMBER: 08/09/646,561

CURRENT FILING DATE: 1998-03-19

PRIOR FILING DATE: 1998-03-19

PRIOR FILING DATE: 1998-03-19

PRIOR FILING DATE: 1998-04-17

NUMBER OF SEQ ID NOS: 65

SOFTWARE: PATENTIN VOICE ST
PRIOR APPLICATION NUMBER: 09/062,597
PRIOR FILING DATE: 1998-04-17
NUMBER OF SEQ ID NOS: 65
SOFTWARE: PATENTIN Ver. 2.0

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 2, My Sequence 5, My Sequence 10, My Sequence 17, Sequence 18, Sequence 17, Sequence 4, My Sequence 17, Sequence 17, Sequence 17, Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Sequence 2, My Se

Publication No. US20020142445A1

GENERAL INFORMATION:

APPLICANT: INFORMATION:

APPLICANT: UNIVERSITA DI GENOVA

ITILE OF INVENTION: Cytocoxicity mediated by human Natural Killer cells and

ITILE OF INVENTION: antibodies that identify the same"

CURRENT APPLICATION NUMBER: US/10/036,444

CURRENT FILING DATE: 1999-11-15

PRIOR FILING DATE: 1999-11-15

PRIOR FILING DATE: 1999-11-15
